PROFILE

Software Engineer with **two and a half years** of experience shipping production software, including high volume payment systems at AccessPay and embedded to cloud development at Dyson. Recognised with AccessPay's Go-Getter Award, delivering reliable high-throughput software, and trusted with resolving and recovering time-sensitive production incidents.

EXPERIENCE

Software Engineer, AccessPay — 2024—Present

Delivered software in a high-throughput payments and cash management platform, working across legacy and modern .NET services, SQL Server, PostgreSQL, RabbitMQ, and cloud infrastructure. Contributed to systems handling complex banking standards, ambiguous user inputs, and time-sensitive production issues.

- **Investigated production** payment routing failures across service logs, SQL data, and message flows to **recover** affected submissions
- Delivered features and fixes across legacy and modern payment and statement platforms
- **Won company Go-Getter** Award and nominated for 2 others (out of 7 awards total)

Software Intern, Dyson — 2022–2023

Completed two 6-month rotations across embedded software and cloud robotics, contributing to live services and internal engineering tooling.

- Shipped software for live customer-facing services
- Created testing and monitoring tools to improve development and QA workflows
- Earned return recommendation

EDUCATION

Nottingham Trent University — Computer Science, 2020–2024

Achieved **1st Class Honours** in Computer Science, ranking **2nd overall in the year**. Key subjects included cloud and distributed systems, ML & AI, and mobile development. **Offered a sponsored PhD** by the university.

Malbank Sixth Form & College — 2018–2020

A-levels in: Maths, Computer Science & Physics.

SKILLS

Backend: C#, .NET, .NET Framework, REST APIs

Data: SQL Server, PostgreSQL, Flyway

Messaging: RabbitMQ

Cloud/DevOps: AWS, GCP, Docker, Azure DevOps

Systems: Linux, Windows Server
